

What is claimed is:

1. A task processing system which comprises:
a storage means for storing an identifier of a created event;
a task control device for creating a task based on said created
event; and
a task processing device for executing said task,
wherein said task processing device executes a search for said
identifier for creating the same task as the task which has
been completed; and further processes said same task.
- 10 2. The task processing system according to Claim 1, wherein
a part or all of resources used by said task which has been
completed is or are released toward said storage means, when
no identifier for creating said same task as said task which has
been completed is found as a result of said search.
- 15 3. The task processing system according to Claim 2, wherein
said resources are deleted from said storage means, when said
resources are transferred from said storage means via said
task control device to said task processing device.
4. The task processing system according to Claim 1, wherein:
20 said storage means stores an identifier of said task which is
being executed by said task processing device; and
said task control device executes a search for said identifier
for creating the same task as said task which is being executed,
and executes said same task, after completing said task
25 which is being executed.
